

Apex Token

The World's First Tokenized Fund of Funds

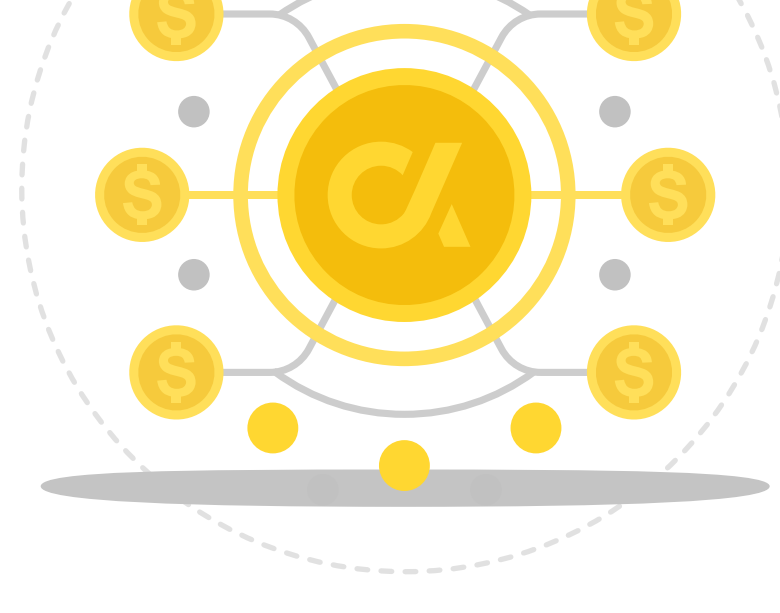

Where Regular Hedge Funds Fall Short

Plenty of hedge funds are happy to manage your investments, but gaining access to them can cost **millions of dollars** that are **locked up for up to two years**.

The Apex Token Difference

Apex Token cares about independent investors.

3 Main Benefits Of Fund To Fund

Access to the world's best crypto focus hedge funds

Minimum investment requirements as low as 5k

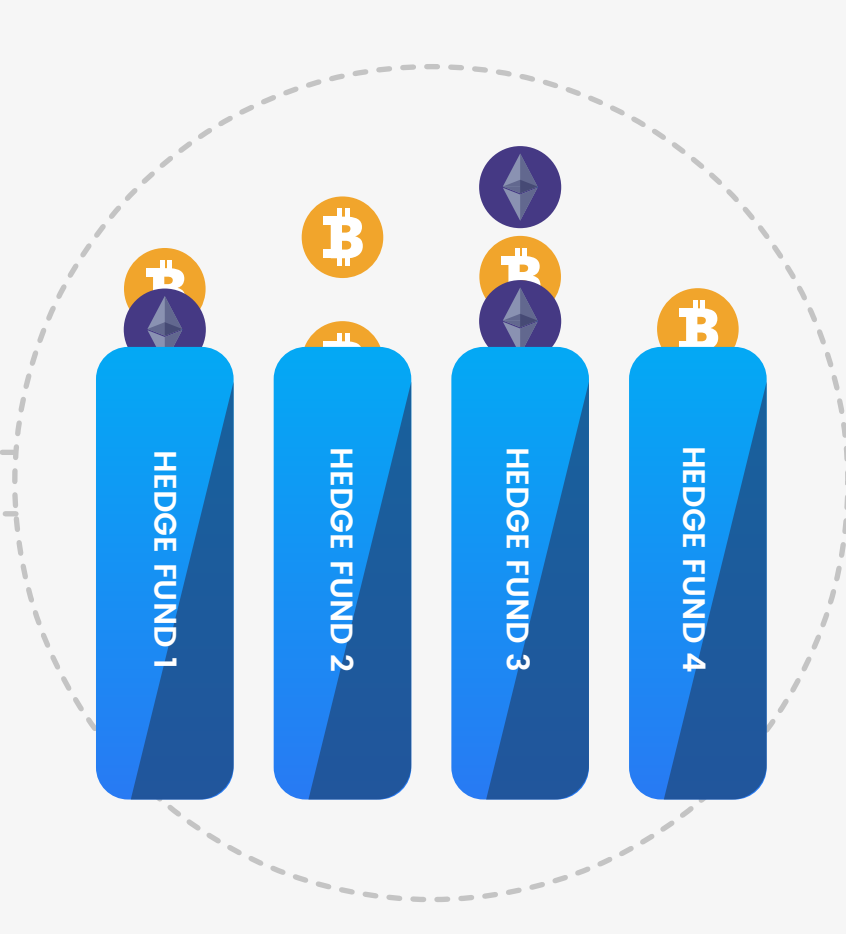

Investments are liquid from day one

How It Works

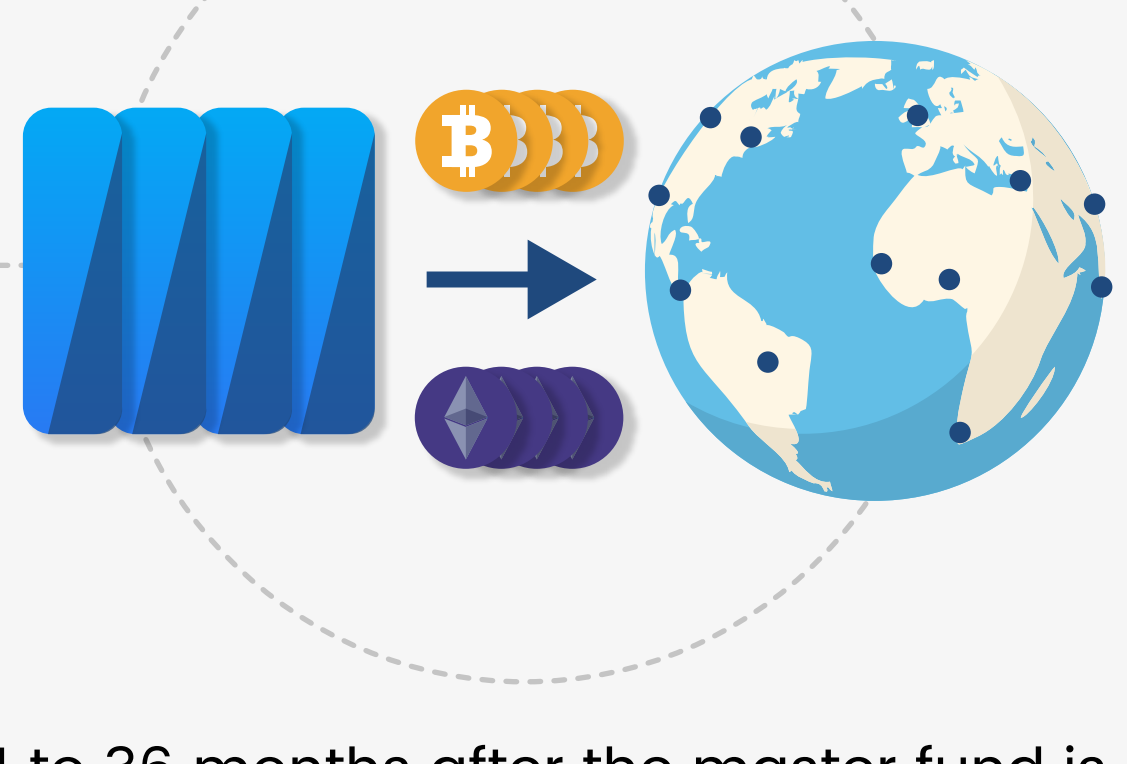

Investors from all over the world contribute to a master fund.

Proceeds from that fund are distributed to several of the world's top hedge funds to manage.

Meanwhile, Apex Tokens, built on the ethereum blockchain, are distributed to the original group of investors and can be traded right away.

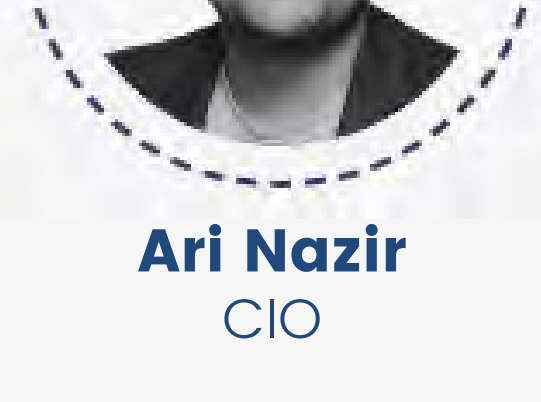

24 to 36 months after the master fund is created, investments are collected from the hedge funds and distributed back to Apex Token holders.
